

Flexible Ultrasound System for Musculoskeletal Procedures

See the details with high-frequency imaging from 18-2 MHz

flexFocus 400
exp

Transverse supraspinatus tendon seen with a high-frequency linear transducer.

Achilles tendon seen with a high-frequency linear transducer.

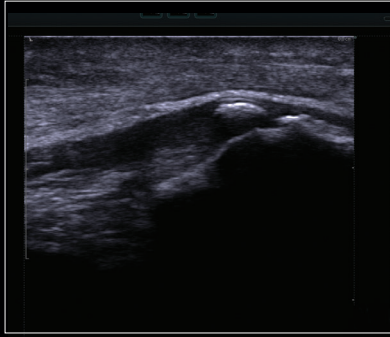

Efficient Workflow. Excellent Imaging. Small Footprint.

- Designed to Guide Interventional Procedures
- Premium High-Resolution Imaging from 18-2 MHz
- Flexible Options to Suit Your Practice
- Easy to Learn and Use
- Exceptional Performance in a Small Footprint

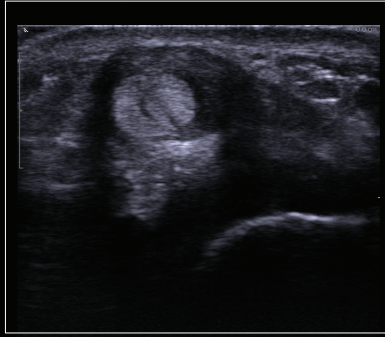

The logo for bk ultrasound, featuring a green circle with a white waveform inside, followed by the letters 'bk' in a large, bold, green font, and the word 'ultrasound' in a smaller, green font below it.

powered by analogic 

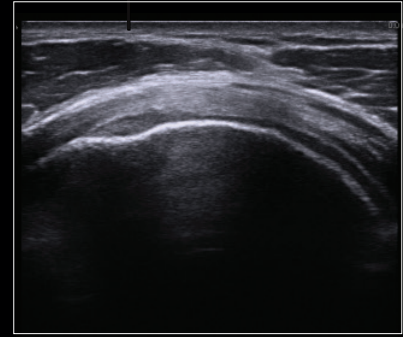

Premium High-Resolution Imaging

Bone spur suprapatellar tendon

Thickened tendon sheath - wrist

Transverse supraspinatus tendon

Ultrasound Designed to Show the Detail You Need

Premium High-Resolution Imaging

- Premium performance system **flex Focus 400 exp** with Quantum Plus Technology™ delivers efficiency, speed, and accessibility
- Very fast frame rates for superb temporal resolution
- Automatic mode adjustment (AMA) to optimize high-resolution B-mode imaging when changing modes and depth

Convenient and Efficient Workflow

- Unique one-button transducer control to freeze, print, and store images
- Advanced needle guides
- Easy disinfection and sterilization
- Four hours of plug-free imaging

Excellent Musculoskeletal Imaging

- Superb details with high-frequency imaging up to 18 MHz
- Outstanding near and far field imaging
- Dedicated transducers to access even the tightest spots

flex Focus 400 exp
Premium image quality, excellent mobility

Dedicated Musculoskeletal Transducers
High-resolution, detailed images of superficial structures

Convenient and Efficient Workflow
Built-in transducer control button for fast workflow
